

We handle pharmaceuticals, vaccines, and vital organs in a time-critical manner. Our cold chain transport equipment is monitored via satellite to maintain integrity of shipments.

HEALTHCARE, BIOTECHNOLOGY, AND PHARMACEUTICAL SUPPORT.

Healthcare, biotechnology, and pharmaceutical companies across the globe face unique transportation challenges, as delays in delivery can result in compromised product, a loss of time, market share and profits. Moreover, many of the products shipped by these companies can make the difference between life and death.

That is why life science companies rely on Panther to provide secure premium logistics solutions for drugs, vaccines, and vital organs.

We are experts when it comes to the management of cold chain products. Our temperature-validated equipment is meticulously qualified, monitored real-time via satellite and managed by specially qualified professionals.

Industry Services

To ensure the integrity, pedigree, efficacy and safe transit of your critical life science and pharmaceutical products, we are proud to provide the following shipment services:

- Temperature control and temperature validated equipment
- Solutions designed to meet stringent FDA regulations and guidelines
- Companion security services
- Shipment monitoring, alarms and asset tracking services
- Dry Ice and Gel Pack Replenishment
- Container Management
- Theft alert network connection
- Customized dual-mode solutions
- Quality management systems
- Specialized equipment to provide care in handling
- Uniquely qualified and security cleared drivers to handle sensitive products

How Panther Helps

When a Panther customer was told that 50 of their U.S. clinic locations would not be able to administer vaccinations as scheduled, Panther was called to pick up vaccines from 50 locations. We accepted the pickups and delivered them to their destinations in time for the immunizations to be administered.
